

NIRBANA UNITED EFC

MEDITATE · DOMINATE · CELEBRATE

A full-featured, bilingual website and club-management system for an eFootball Mobile club — a public site that stays up to date on its own, plus a private admin dashboard the club captain uses to run everything.

Live site: nirbana-united-efc.netlify.app

Source code: github.com/AishikBarua/nirbana-united-efc

Next.js 14 (App Router) · TypeScript · React 18 · Tailwind CSS · Prisma
· SQLite / PostgreSQL · next-intl · Netlify · Zod · bcrypt

At a Glance

- ◆ **Fully bilingual** — every page, every label, every date format, in English and Bengali, switchable instantly
 - ◆ **Self-updating** — club stats, match results, and rankings sync automatically every hour from the club's live tracker page
 - ◆ **Private admin dashboard** — full content management for players, matches, news, standings, and photos, with zero coding needed
 - ◆ **Moderated community features** — visitors can comment on news and photos, signed only with a real roster name, approved by an admin before going public
 - ◆ **Responsive** — looks and works great from a phone to a desktop
 - ◆ **Site-wide live search** and an automatic notifications feed
 - ◆ **Real data visualizations** — hand-built charts (no heavy chart library) for career stats, win/draw/loss breakdowns, and season trends
-

What makes this project technically interesting

- ◆ **A real automatic data pipeline** — a background job scrapes the club's public tracker page every hour, cross-checks every number against the tracker's own totals before writing anything, and safely does nothing if the page layout ever changes unexpectedly
 - ◆ **One codebase, two databases** — SQLite for zero-setup local development, Postgres in production, switched automatically based on environment
 - ◆ **Hand-built data visualizations** — donut charts, bar comparisons, and trend lines are custom SVG/CSS, not a third-party charting library
 - ◆ **Defense in depth on security** — every admin action is protected at both the routing layer and the individual API-route layer, all input is schema-validated, and comment authorship is checked server-side against the live roster
 - ◆ **Zero-cost hosting** — hosting, database, image storage, and the hourly background job all run on Netlify's free tier
-

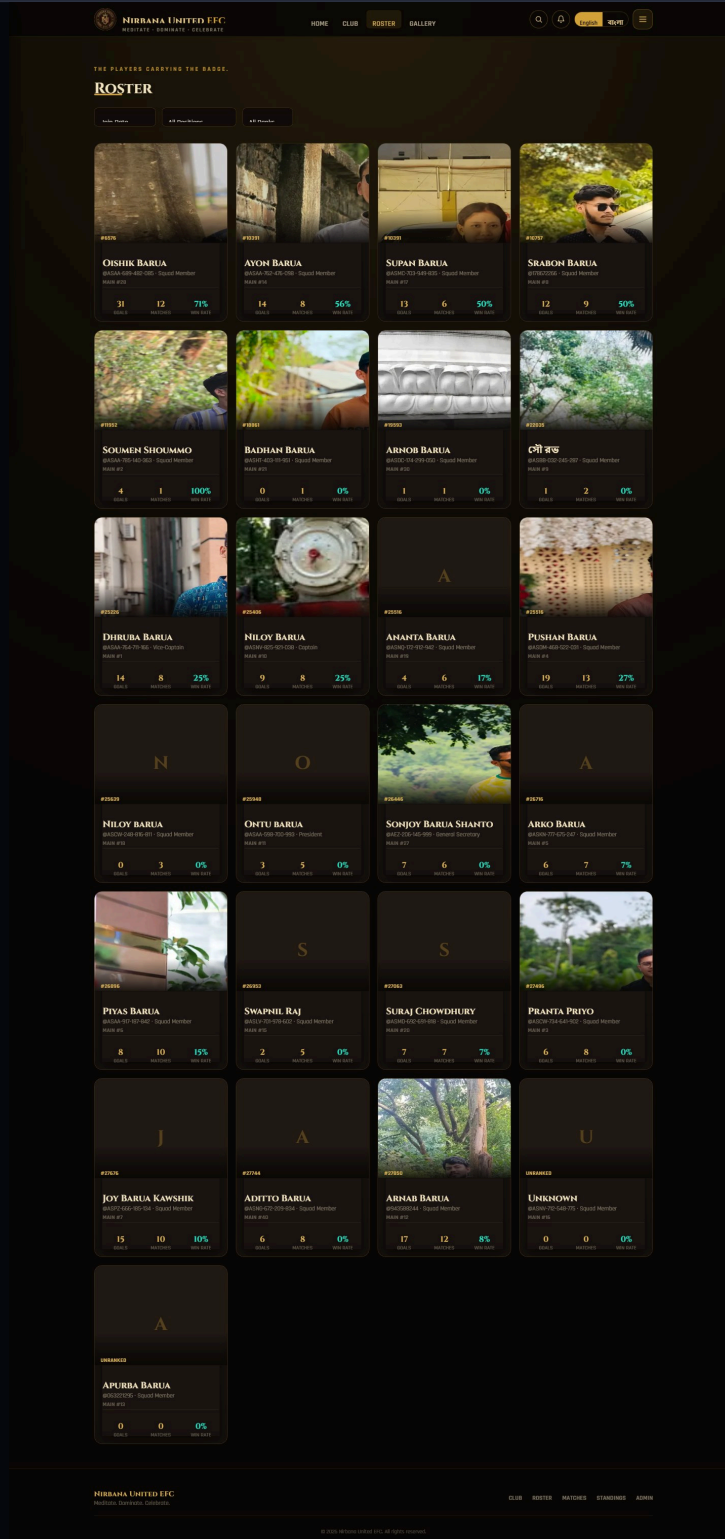

Homepage

The landing page: club crest and tagline, quick stats (active members, total wins, league position), the most recent match results, upcoming fixtures, and the latest news — everything a visitor wants to see first.

Roster

Every squad member as a card — photo, in-game ID, position, all-time tracker rank, and career stats (goals, matches, win rate) — sortable and filterable by join date, position, and rank.

Player Profile

Click into any player for their full career breakdown: a win/draw/loss donut chart, a career-vs-this-season comparison, a stats-over-time trend line that fills in automatically as more tracker syncs happen, their in-game squad cards, favorite player, and bio.

Nirbana United EFC — Project Showcase

05

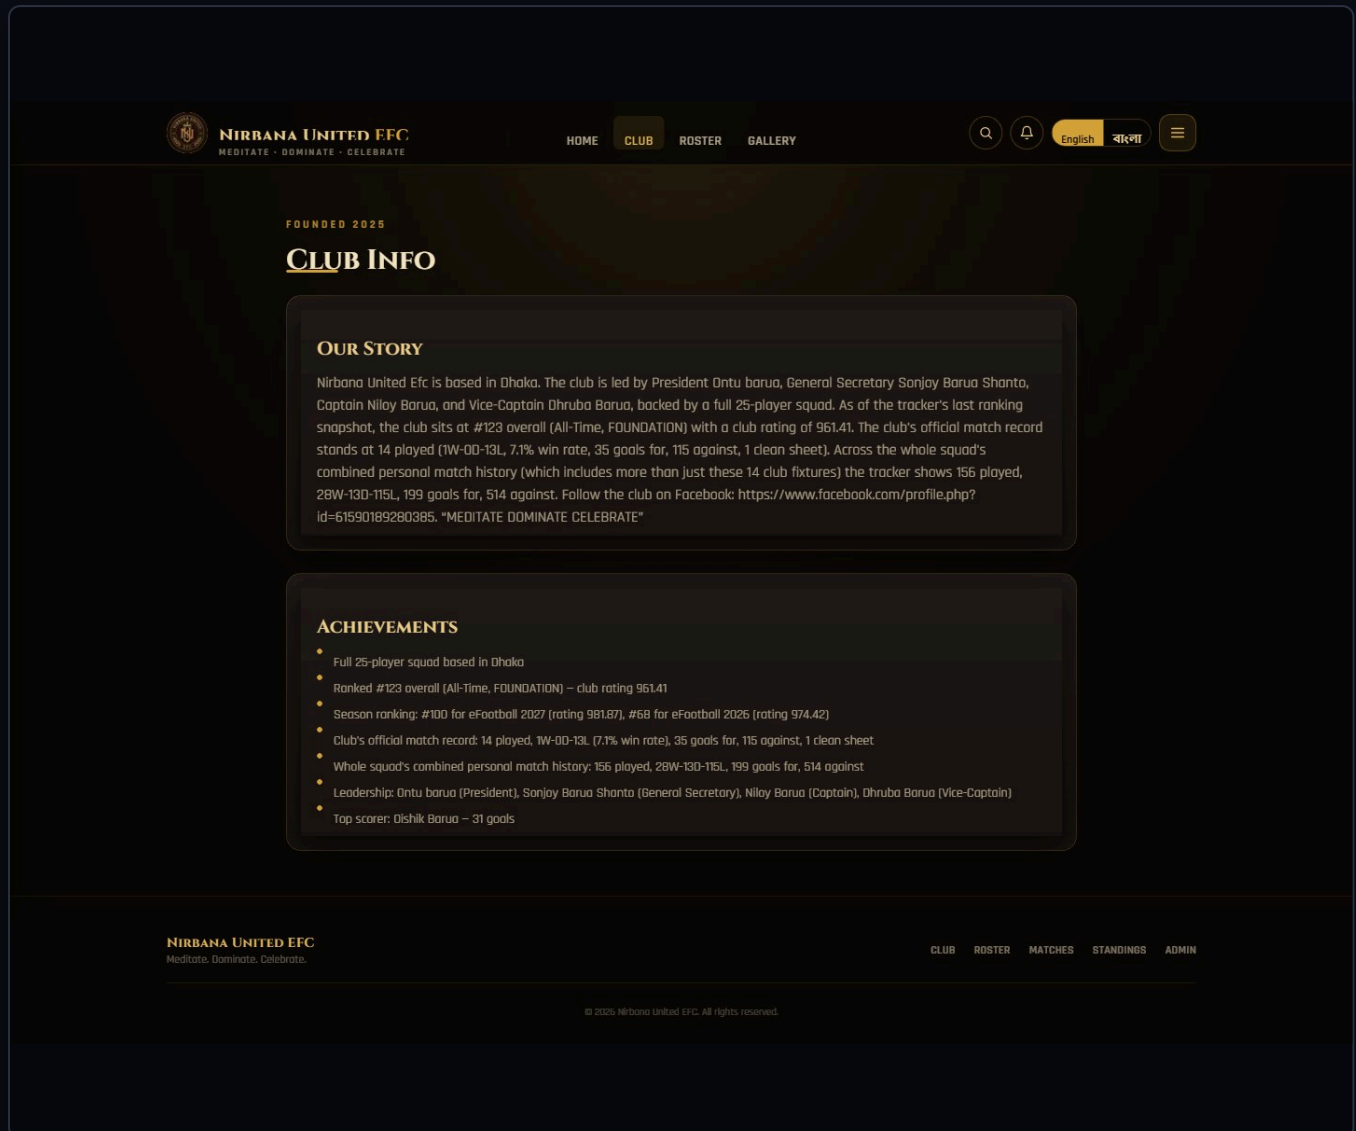

Matches

Every fixture and result, home and away, with running win-rate stats.

Club

The club's own "About" page — history, founding year, and achievements, all editable from the admin dashboard.

Transfers

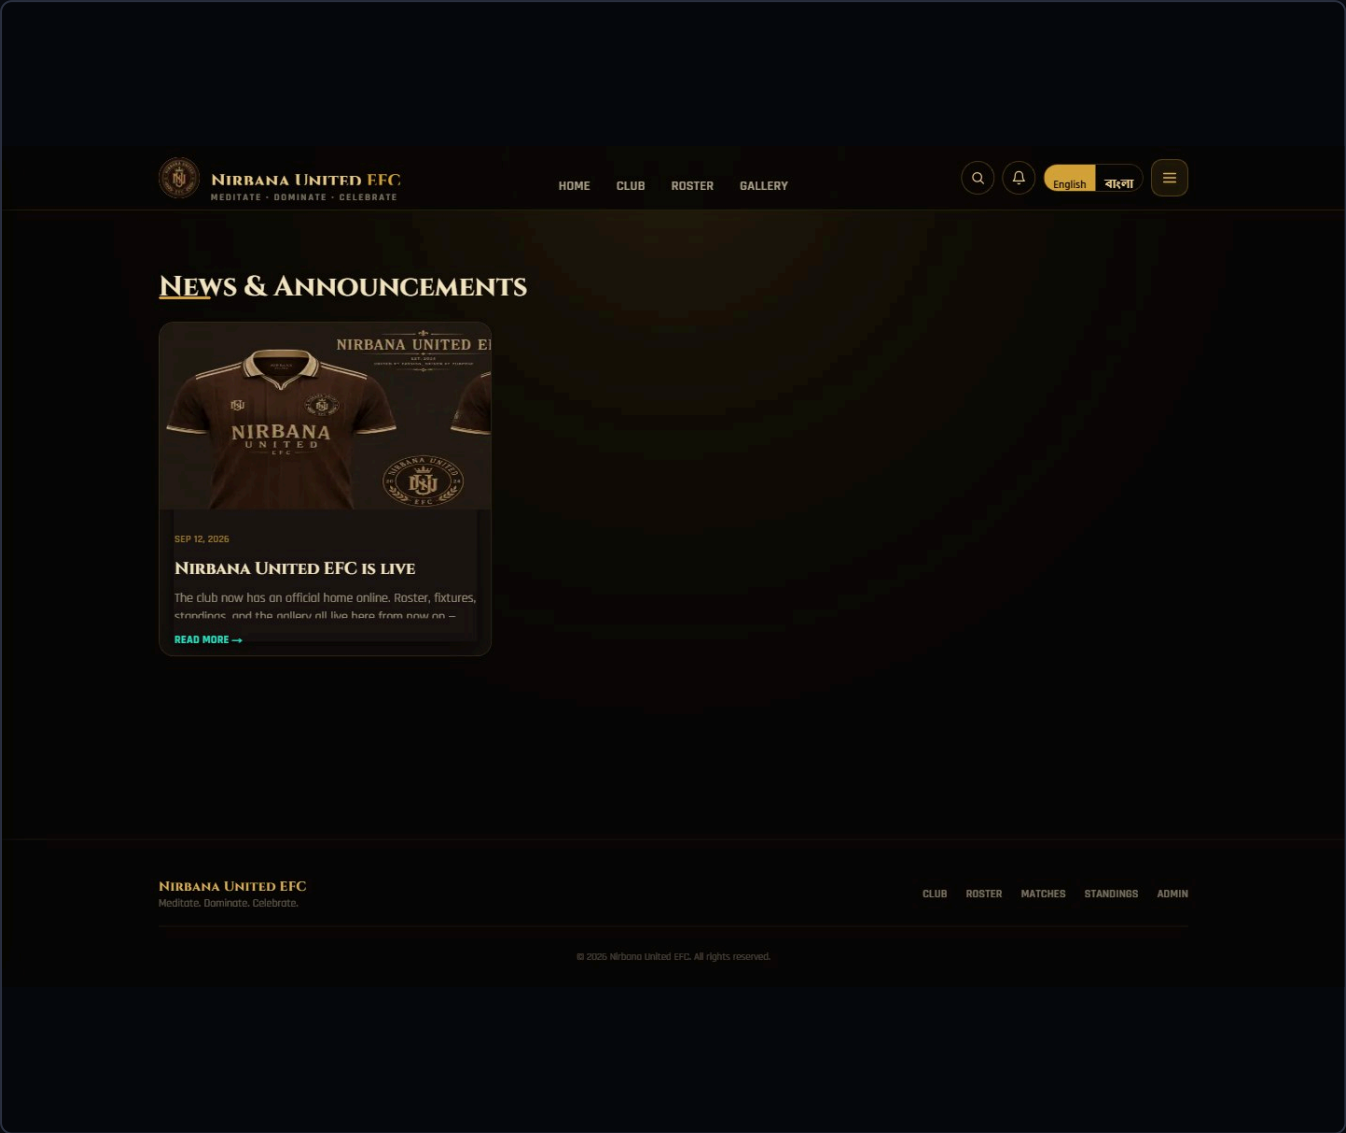

A chronological transfer log (new signings, departures) pulled straight from the club's tracker page, no manual entry.

Rankings

Periodic all-time/seasonal rank snapshots, synced automatically from the club's tracker page.

News

Club announcements and updates, each with its own comment thread.

News Article

A single news post, with its comment thread below (moderated — every comment waits for admin approval before going public).

Gallery

A photo grid with a full-screen lightbox viewer — every photo can be commented on too.

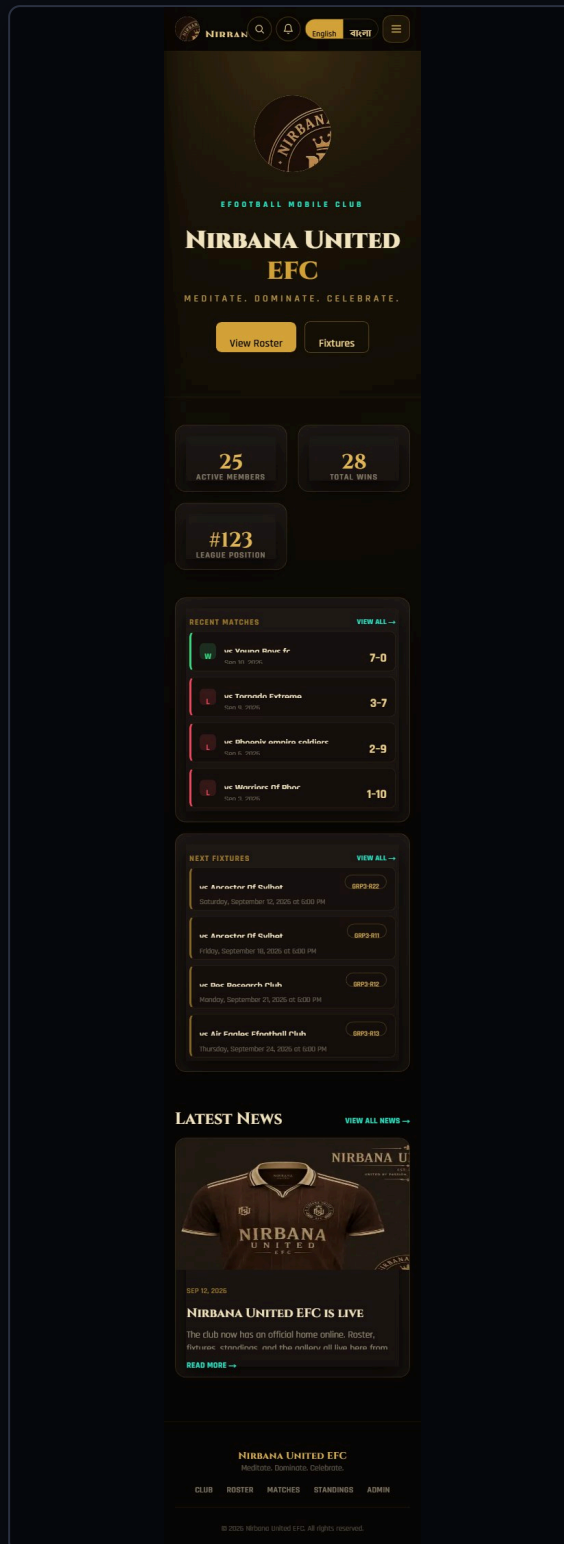

Fully Bilingual

Every single string on the site — navigation, labels, dates, even the tracker-sourced stats — is available in Bengali as well as English, switched instantly from the navbar with no page reload delay.

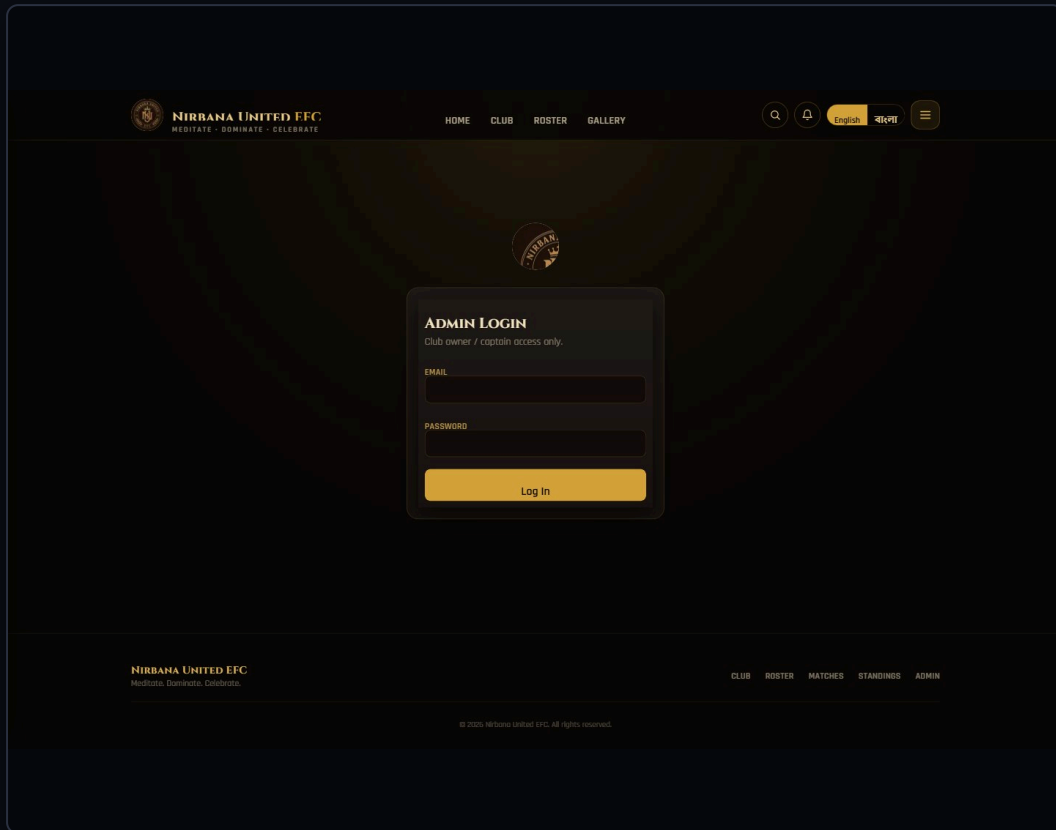

Built for Mobile

The whole site is fully responsive — here's the same homepage on a phone screen.

Admin Panel

Behind a secure login, the club captain manages every piece of content on the site — no code, no database tools, just forms.

From the dashboard, the admin can:

- ◆ Add, edit, or remove players and their photos
- ◆ Record match results and upcoming fixtures
- ◆ Publish news posts
- ◆ Update the club's standings row
- ◆ Upload gallery photos
- ◆ Moderate pending visitor comments with one click
- ◆ Edit the club's About text
- ◆ Trigger an immediate data sync from the tracker instead of waiting for the next automatic hourly run

THANK YOU

For the full technical documentation — data model, every API route, security details, deployment steps, and the complete list of fixes made during development — see **DOCUMENTATION.md** in the project repository.
